

MapGO is a SaaS web-based service for mapping and optimising travel routes.
MapGO's clever algorithms will plan for you the working day of your sales representatives, service technicians, couriers and drivers in the field.

The main task of the application is the advanced optimisation of the sequence of waypoints and the assignment of routes to available drivers, taking into account:

- working hours of drivers
- time windows at points
- vehicle capacities
- service times at each point

Ready-made routes are sent to the driver's phone

35%

**SAVINGS ON FUEL
AND NUMBER
OF VEHICLES**

**ROUTE COSTS
KNOWN IN ADVANCE**

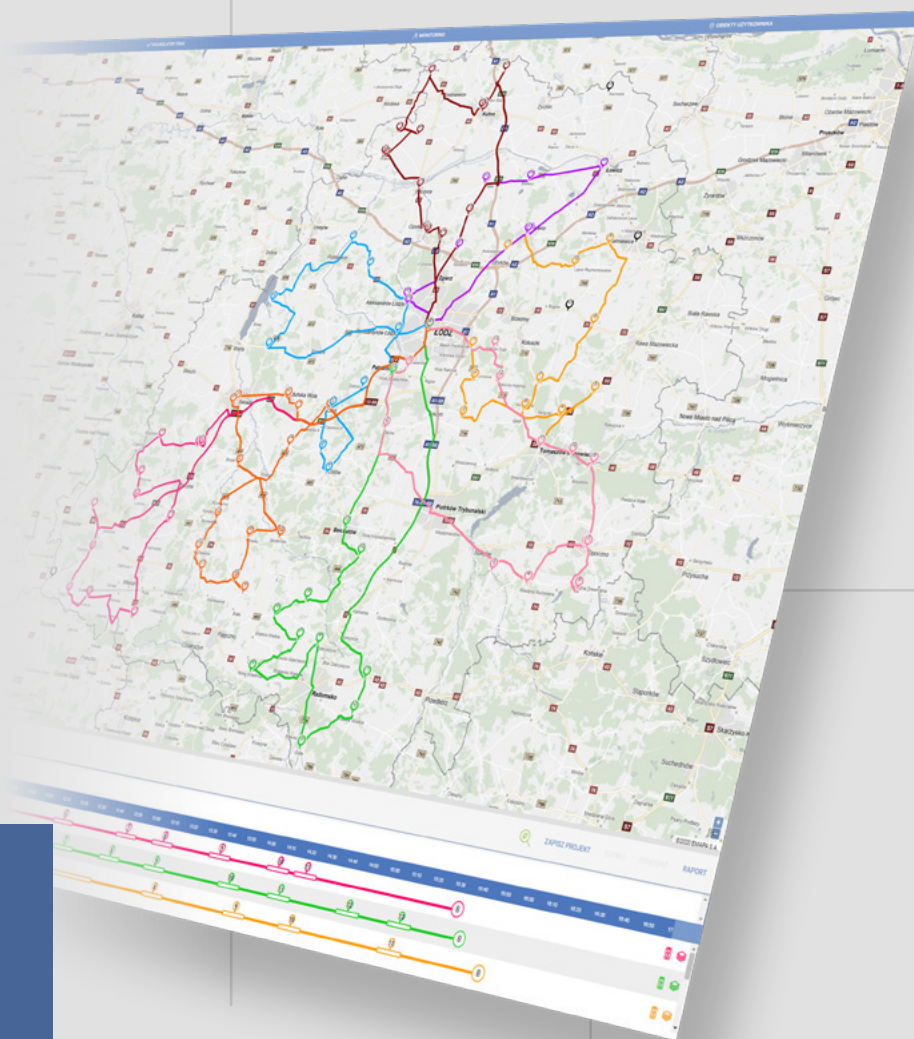

**INSTANT
PLANNING**

**FLEXIBLE
ALGORITHMS**

BENEFITS

MapGO will offer you such a set of routes for selected drivers that their total cost is the lowest for you. You decide whether MapGO will use all the available employees simultaneously or minimise their number.

**SAVINGS OF UP TO 35%
ON FUEL AND NUMBER OF VEHICLES**

With optimal planning, you will be able to serve more customers in less time. A perfect fit into your time windows will increase customer satisfaction.

**20% MORE
ORDERS**

How much will it cost you to handle all the planned orders? You will find out already at the project stage. You will find out detailed costs for fuel, tolls, car rental and driver's work.

**ACCURATE COSTS
OF ROUTES KNOWN IN ADVANCE**

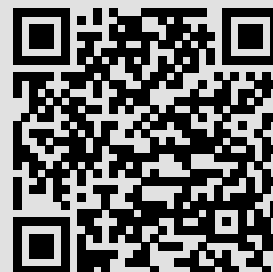

With a ready-made route plan, you can send each route to the driver with a single click, and he or she will open it in the navigation system you receive as part of the MapGO licence.

**READY ROUTE
ON THE DRIVER'S PHONE**

All you need to do is import the addresses of your customers (delivery points) into the programme and set the parameters for the vehicles and drivers' working hours.

MapGO instantly locates addresses on the map and determines the most advantageous set of routes for you, serving as many customers as possible.
